**DETAILED ACTION**

***Response to Arguments***

Applicant's arguments filed February 25, 2009, have been fully considered and are persuasive. The rejection of claims 1, 2, 10-13, 17, 19, and 20 and the objection to claims 4, 7-9, 14-16, 18, 21, and 22 have been withdrawn.

***Allowable Subject Matter***

Claims 1, 2, 4, and 7-22 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 7, and 21, the prior art, as best exemplified by US 6,644,402 to Sharma et al., teaches a method of installing a double ended distributed sensing optical fiber assembly within a guide conduit (Figure 6), the method comprising: providing a distributed sensing optical fiber assembly having a first elongate section (424) with a first proximal end and a first distal end, and second elongate section (425) with a second proximal end and a second distal end; providing a nose section (420), which interconnects the first proximal end to the second proximal end such that light transmitted along the length of one section of fiber optical cable is transmitted via the nose section into the other section of fiber optical cable; inserting the nose section into the guide conduit such that the nose section moves through the guide conduit ahead of the first elongate section and second elongate section (Figure 6); and connecting the first distal end and second distal end to a light transmission and receiving unit (430); wherein the nose section has an outer width which is less than 1 cm (column 2, lines 1-16) and the nose

section, the first elongate section, and the second elongate section are formed from a single fiber optical cable which is bent into a U-shaped configuration in a region of the nose section and the fiber optical cable is stretched in the region of the nose section such that the fiber optical cable has a smaller width in the region of the nose section than in most other parts of the fiber optical cable (Figure 6).

However, regarding claim 1, Sharma, taken individually or in combination with the prior art, fails to disclose or render obvious that the cable is heated when it is stretched and the bent section of the stretched cable is embedded in a nose-shaped body of material having a lower refractive index than that of the stretched cable embedded therein.

Furthermore, regarding claim 7, Sharma, taken individually or in combination with the prior art, fails to disclose or render obvious that the light transmitting and receiving unit transmits light pulses or alternating or simultaneous pulsed and continuous waves into the first and second distal ends distributed sensing data from light backscattered from different points along the length of the first and second elongate sections to the distal end into which the light pulses are transmitted.

Additionally, regarding claim 21, Sharma, taken individually or in combination with the prior art, fails to disclose or render obvious that the assembly is configured as a pressure sensor wherein each section of cable passes through a reference region in which the cable is exposed to a known hydraulic pressure.

Claims 2, 4, and 10-20 are allowed due to dependence from allowed base claim 1.

Claims 8 and 9 are allowed due to dependence from allowed base claim 7.

Claim 22 is allowed due to dependence from allowed base claim 21.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JERRY BLEVINS whose telephone number is (571)272-8581. The examiner can normally be reached on Monday through Friday.
